typical weight loss VS cryolipolysis procedure

Fat cells after typical weight loss

After dieting and weight loss ,fat cells get smaller.
But the number of fat cells did not change.
When weight gain,fat cells get bigger.

Ineffective weight loss

Fat cells after cryolipolysis procedure

Cryolipolysis is the cooling of subcutaneous fat cells,which induces lipolysis.
Reduce the number of fat cells of treated areas by about 20-25%.

Permanent weight loss
