

MODERN HARDWARE SHOWROOM WITH ANODIZED COOPER SURFACE FINISH PANELS PROJECT

December 2022

This is an established hardware store in the industry that dates back to 199X. Several decades of journey have not eroded the continuous improvement of this store, but rather, it has consistently absorbed experience and maintained progress over the years . The store has undergone the test of time and now requires a rejuvenation. Similarly, Prance, with respect for the past and aspirations for the future, is willing to offer a brand-new spatial experience for the rejuvenated 'Modern' hardware store.

Project Overview And Architectural Profile

Modern Hardware, established in 1990, offers a comprehensive range of reliable products. Over the decades, Modern Hardware has continued to thrive through various challenges, exporting its products worldwide and earning the trust and recognition of customers from all corners of the globe. In 2020, Modern Hardware made the decision to infuse new vitality into its longstanding professional hardware business.

For a hardware business with such depth, substance, and historical heritage, our primary consideration was to showcase a unique, stable and dependable style. Simultaneously, Prance, with its own rich industry history, approached this project as if reuniting with an old friend.

After multiple site visits and extensive discussions, we decided to use anodized aluminum panels as the decorative material to showcase Modern Hardware's unique character. These aluminum panels, treated with anodization, not only exhibit outstanding corrosion resistance but also feature a cleverly crafted antique effect, exuding a profound sense of history and exquisite vintage aesthetics. This choice perfectly conveys the style and essence of Modern Hardware.

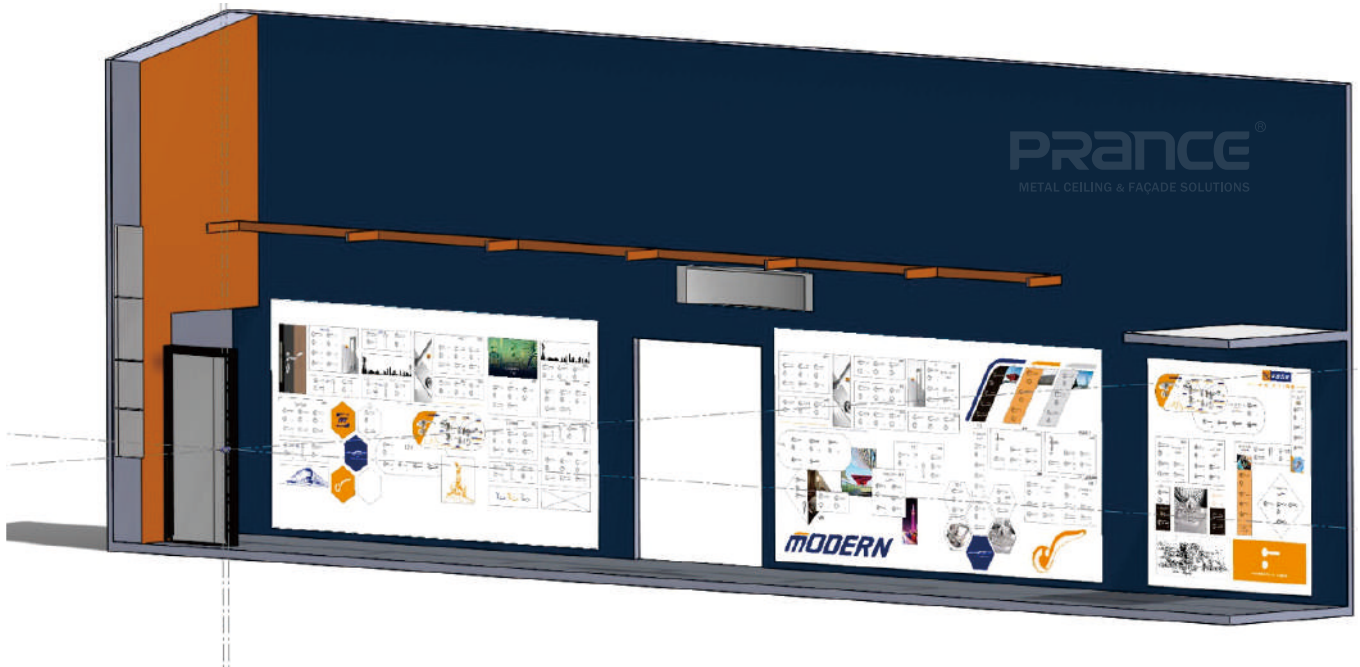

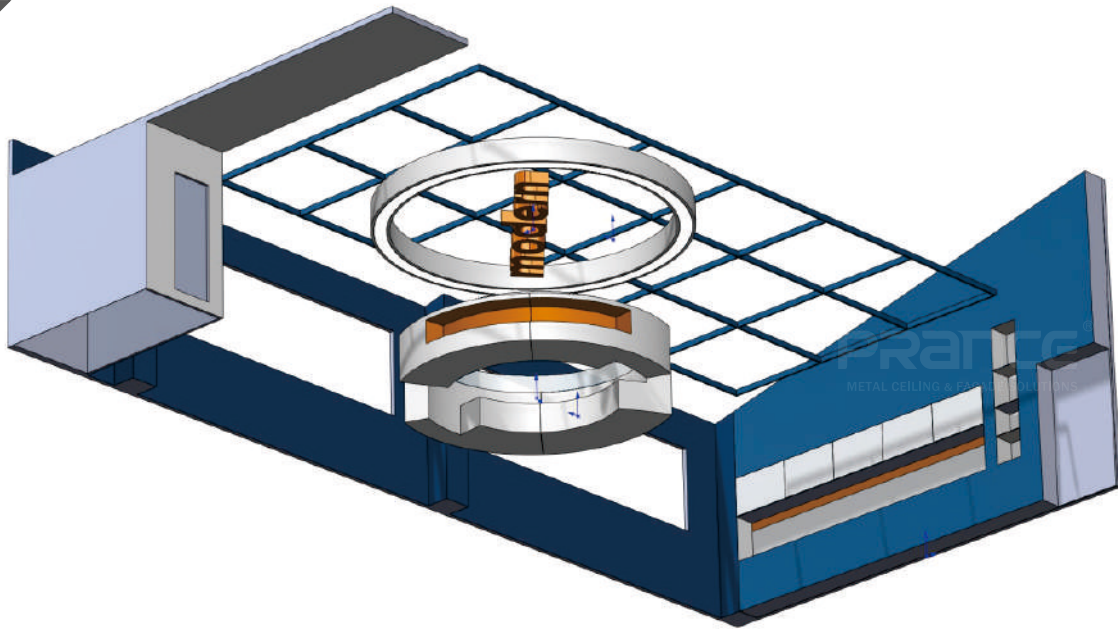

• **Project Time line:** December 2022

Multiple On-Site Measurements and Verification,
Blueprint Planning, 3D Model Demonstrations,
Drawing Product Information, Material Selection,
Processing, and Production, Technical Guidance
and Support During Construction.

On-site Installation Process Photos

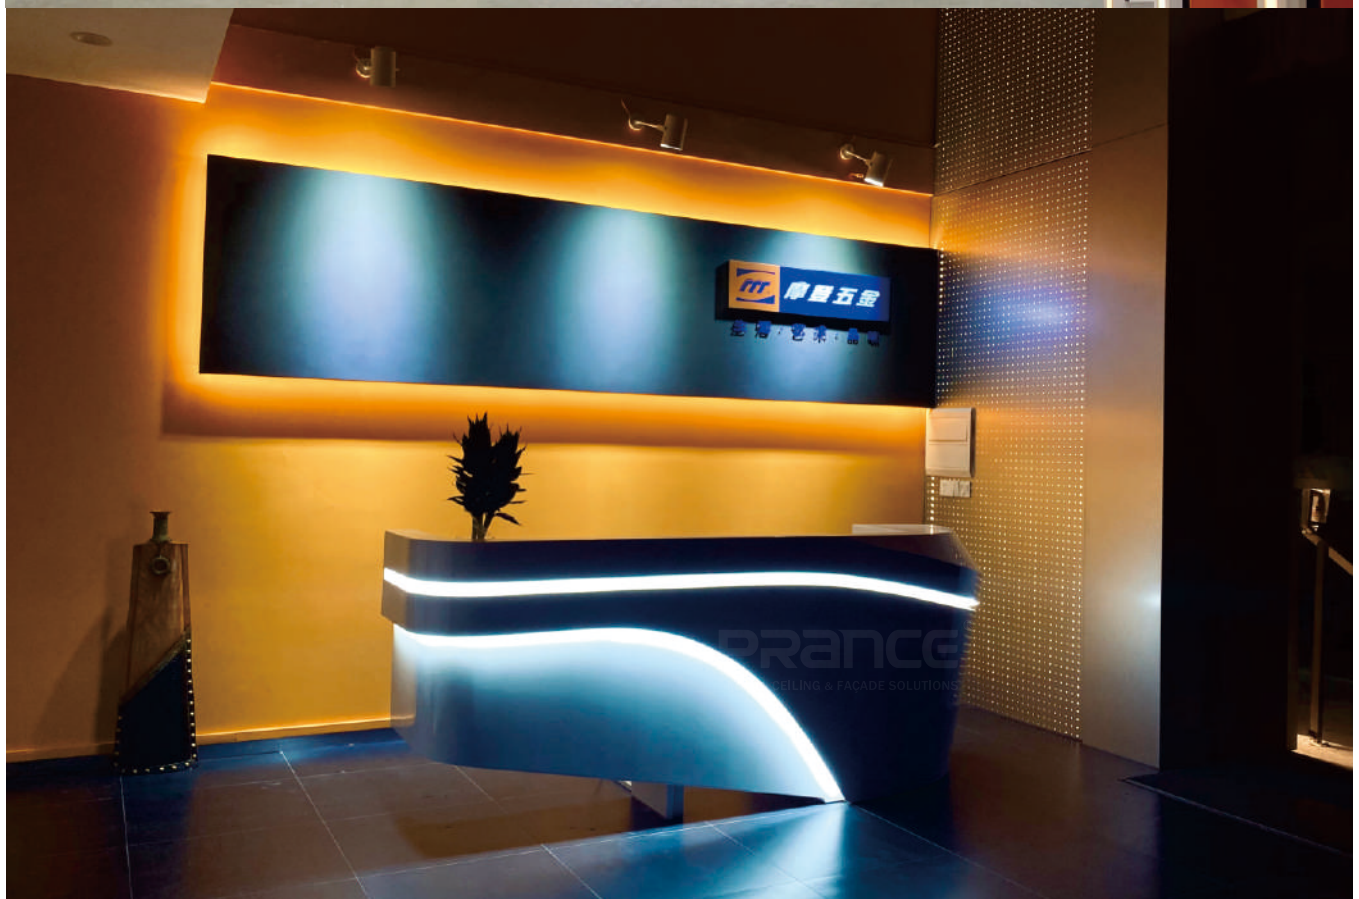

From project initiation to procurement of construction materials, and through to installation supervision, dedicated project personnel oversee every aspect. At Borsith, we uphold the unwavering commitment to see every project through to the end with craftsmanship and dedication.

Although the project is not large, for the deepening design of metal plates, the details of the closing and the size of the plates need to be taken into account in making this corner staircase. Generally speaking, it didn't take long for us to finish the project.
