1. Product introduction

HOP-ELM205 is an embedded thermal receipt printer with small size, beautiful appearance, light weight, full functions, high speed, high definition, simple operation and convenient connection. It can be widely used to medical equipment, fire alarm control, industrial control and various other instruments to realize ticket bill printing.

The HOP-ELM205 supports Windows, Linux, Android and IOS systems. It can directly print a variety of font, Chinese characters and graphics

Features

- Classic embedded design, buckle cover design
- Imported thermal print head with high reliability and long life
- Support multiple bitmaps (including NV Logo bitmap) storage and print
- Support multiple bar codes such as CODE128
- Support GB18030 large character library, both common words and uncommon words can be printed
- Support multiple international languages, support customized graphic printing
- Support ESC standard instruction set and factory-defined instruction set
- Support USB/serial interface,details see specification parameters
- Support Windows, Linux, Android and IOS systems
- Provide support for free on application development, support customization needs

Application field

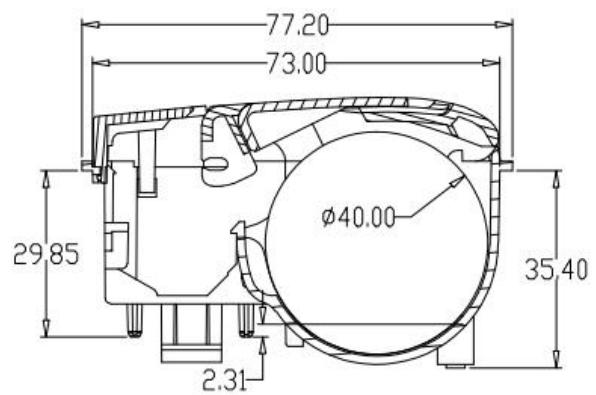

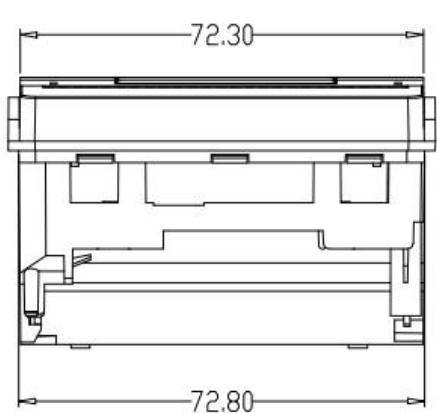

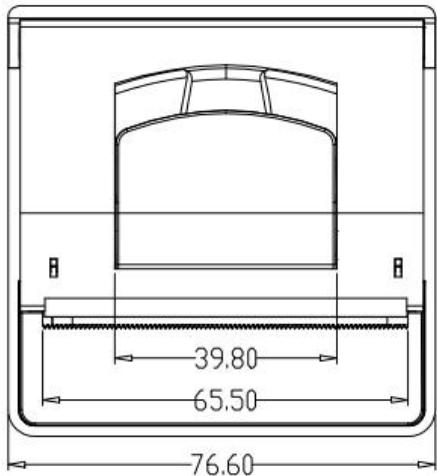

- Supermarkets, takeaways, restaurants (Reception and kitchen) bill printing
- Query, transaction and other service system ticket printing
- Sports, postal, aviation and other industries printing
- Data test printing in scientific research, medical, environmental protection and other industries

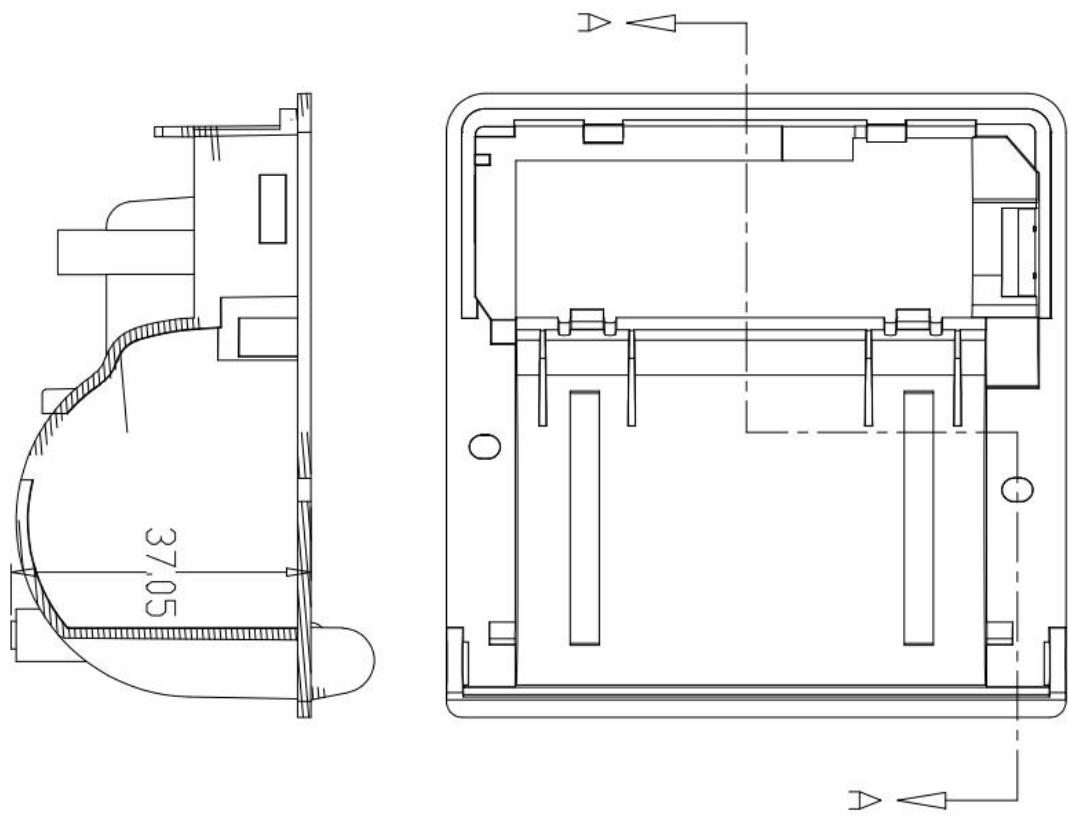

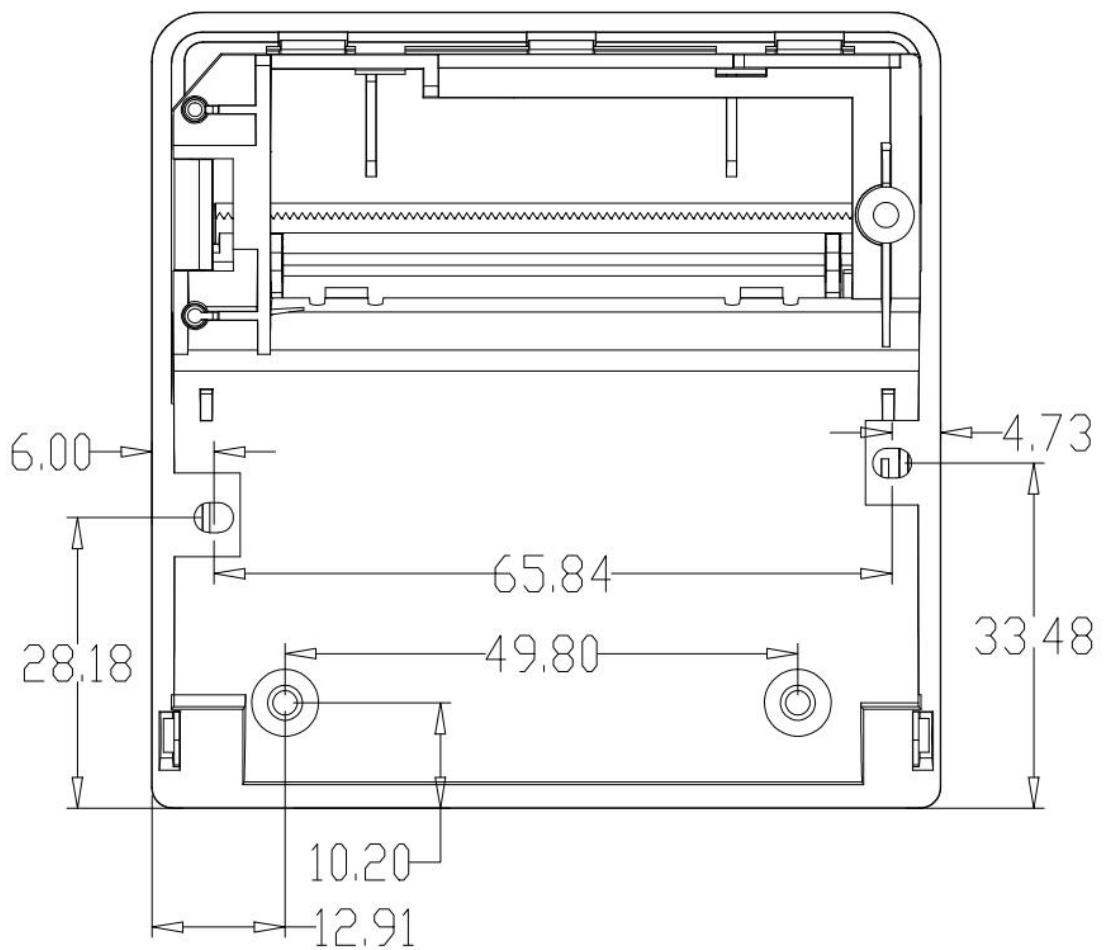

Specifications

Printing method	Line direct thermal
Print width	48mm (paper width 57.5±0.5mm)
Print speed	90mm/s(MAX)
Print density	384 points / line (203 DPI)
Print life	>50k

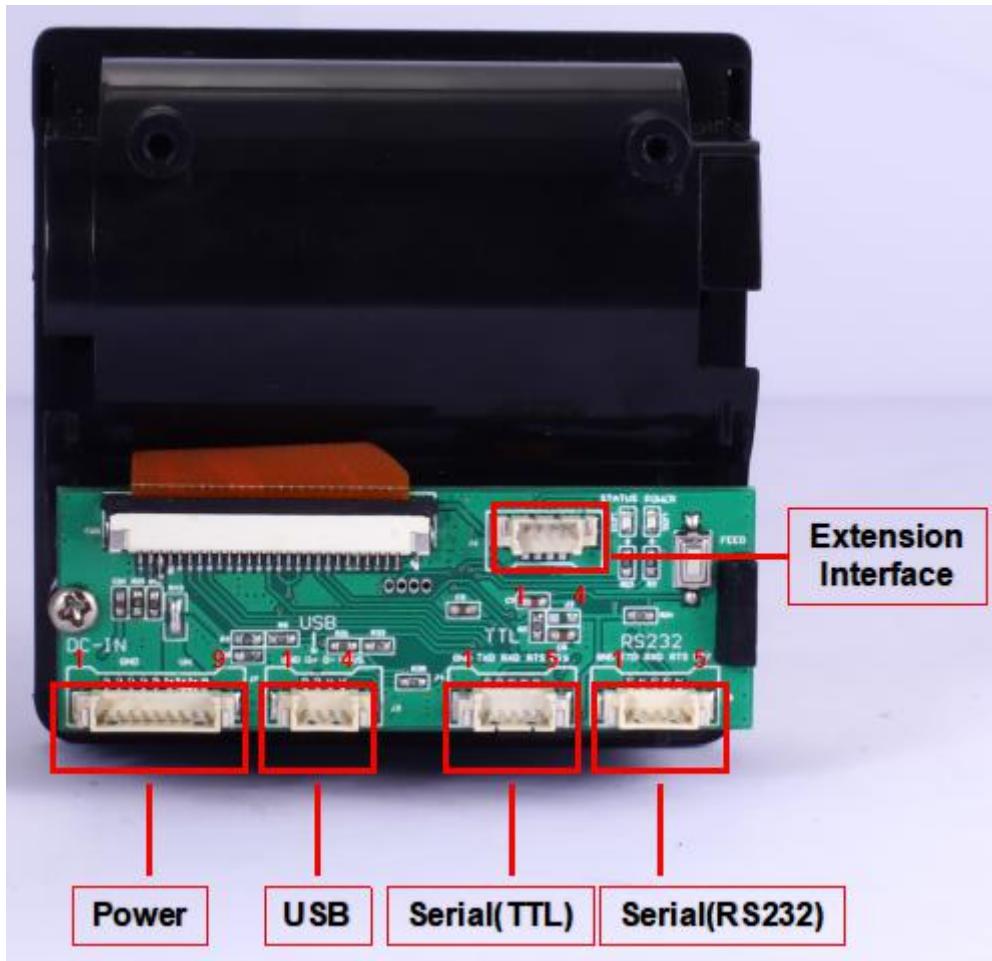

Built-in characters	International Language : 192 international characters, 69 international code pages Simplified Chinese: GB18030 GB font, support common words and uncommon words Traditional Chinese: Big5 (optional) Support for custom-defined characters and Chinese characters
Default line spacing	3.75mm=30/203 inches, line spacing support is set in 1/230 inch increments
Print command	ESC/POS command (see programming manual for details)
Bar code system	UPC-A,UPC-E,CODE39,CODE93,CODABAR,CODE128,ITF,EAN 8(JAN8),EAN13(JAN13)
Print bitmap	Supports different density bitmap printing and NV Logo bitmap storage printing
Detection function	Photoelectric induction detect paper, thermal heat sensor protect print head
Operation instructions	Feed button , power indicator and error indicator
Print interface	USB2.0 (USB printing support) RS232/TTL serial port (choose one)
Receive Cache	4KBytes
Paper Requirements	Type: Thermal Roll Paper Width: 57.5±0.5mm Outer diameter: ≤40MM
Dimensions	76.8MM*77.4MM*47.6MM (length * width * height)
Assembly size	72.8MM*73.4MM*47.6MM (length * width * height)
Environmental requirements	Working environment: temperature 0 ~ 45 ° C, humidity 20% RH ~ 85% RH (no condensation) Storage environment: temperature -20 ~ 60 ° C, humidity 5% RH ~ 95% RH (no condensation)
Power supply specification	Input voltage: 6-12V (voltage range depends on hardware version)
Reliability performance	MCBF > 5 million lines

Assembly Dimension

2. Pin Definition

2.1 Power Interface Definition

Pin number	Signal name
1.2.3.4.5	GND
6.7.8.9	VIN(+12V) OR(6-9V)

2.2 USB Interface Definition

Pin number	Signal name	Illustration
1	GND	GND
2	D+	Data line
3	D-	Negative data line
4	VUSB	+5V

2.3 Serial(TTL&RS232) Interface Definition

Pin number	Signal name	Function
1	GND	GND
2	TXD(Tx, Printer Output)	Output
3	RXD(Rx, Printer Input)	Input
4	RTS (Printer Output)	Output
5	CTS(Printer Output)	Output

4 Instruction list

LF	Printing and paper feed	Printing and paper feed instructions
CR	Enter	
ESC J	Printing and paper feed n dot	
ESC d	Printing and paper feed n line	
ESC 3	Set line spacing n dot	
ESC 2	Set line spacing to default	Print settings
ESC \$	Set print position	
GS L nL nH	Set left blank	
ESC !	Set character printing	
ESC M n	Select font	
GS ! n	Set character size	
GS B n	Set, remove white print	
ESC - n	Set, remove underline	
ESC V n	Set, release 90 degree rotary printing	
ESC a	Print alignment	
FS &	Set Chinese mod	Graphic print instruction
FS .	Cancel Chinese mode	
ESC R n	International character set	
ESC t n	Select character code page	
ESC *	Vertical data filling	
GS v 0	Picture level model data printing	Graphic print instruction
FS q	Definition NV bitmap	
FS p n m	Print NV bitmap	
HT	Horizontal tabulation	Tab command
ESC D	Set tab position	
GS H	Set one dimensional bar code readable character (HRI) Printing position	One dimensional bar code print instruction
GS h	Set bar height	
GS w	Set bar width	
GS k	Print one-dimensional bar code	
DLE EOT n	Real-time transfer state	Status command
DLE ENQ n	Real time printer request	

ESC @	Initialization printer	Other instructions
DC2 T	Print page self testing	

5 Detailed instructions

①Printing and paper feed instruction

Printing and paper feed

Instruction name	Printing and paper feed
Instruction code	ASCII : LF Decimal system : 10 Hexadecimal: 0A
Function description	Print the contents of the cache, After that according to the current line spacing setting feed one line paper, and adjust the print position to the next line start position.
Parameter range	not have
Default value	not have
Support model	All models
Matters needing attention	not have
Use example	not have

Enter

Instruction name	Enter
Instruction code	ASCII : CR Decimal system : 13 Hexadecimal : 0D
Function description	When the print buffer is not empty, the same with LF, otherwise no effect.
Parameter range	not have
Default value	not have
Support model	All models
Matters needing	not have

attention	
Use example	not have

Printing and paper feed n dot

Instruction name	Printing and paper feed n dot
Instruction code	ASCII : ESC J n Decimal system : 27 74 n Hexadecimal : 1B 4A n
Function description	Print the contents of the cache and paper feed n dot
Parameter range	$0 \leq n \leq 255$
Default value	not have
Support model	All models
Matters needing attention	When the print buffer is empty, only paper feed n dot. After the execution of this directive, adjust the print position to the next line start position.
Use example	1b 40 30 31 32 1b 4a 10

Printing and paper feed n line

Instruction name	Printing and paper feed n line
Instruction code	ASCII : ESC d n Decimal system : 27 100 n Hexadecimal : 1B 64 n
Function description	Print the contents of the cache and paper feed n line
Parameter range	$0 \leq n \leq 255$
Default value	not have
Support model	All models
Matters needing attention	This command sets the print start position as the starting point of the line.
Use example	1b 40 30 31 32 1b 64 01

②Print settings instructions.

Set line spacing n dot.

Instruction name	Printing and paper feed n dot
Instruction code	ASCII : ESC 3 n Decimal system : 27 51 n Hexadecimal: 1B 33 n
Function description	Set line spacing n dot.
Parameter range	$0 \leq n \leq 255$
Default value	n = 33
Support mode	All models
Matters needing attention	<p>The line spacing is shown as follows:</p>  <p>If the set line spacing is less than the maximum character height in a row, the row spacing is equal to the maximum character height. If ESC 2, ESC @, printer reset, printer power off, line spacing restored to default.</p>
Use example	1b 40 1b 33 30 30 31 32 0d 0a 30 31 32 0d 0a 1b 32 30 31 32 0d 0a 30 31 32 0d 0a

Set line spacing to default

Instruction name	Set line spacing to default
Instruction code	ASCII : ESC 2 Decimal system : 27 50 Hexadecimal : 1B 32
Function description	Set the line spacing to the default 33 dot
Parameter range	not have
Default value	not have
Support model	All models
Matters	For a detailed look at the ESC 3 line distance instruction.

needing attention	If the set line spacing is less than the maximum character height in a row, the row spacing is equal to the maximum character height. You can use ESC 3 custom line spacing.
Use example	not have

Set print position

Instruction name	Set print position
Instruction code	ASCII : ESC \$ nL nH Decimal system : 27 36 nL nH Hexadecimal : 1B 24 nL nH
Function description	Adjust the print position to the starting position of the print (nL + nH * 256)
Parameter range	$0 \leq nL \leq 255, 0 \leq nH \leq 255$
Default value	not have
Support mode	All models
Matters needing attention	This instruction is only on the line, after the print position is reset to the print start position. Move beyond print range to next line print.
Use example	1b 40 1b 24 08 00 30 31 32 0d 0a 30 31 32 0d 0a

Set left blank

Instruction name	Set print position
Instruction code	ASCII : GS L nL nH Decimal system : 29 76 nL nH Hexadecimal : 1D 4C nL nH
Function description	Set left blank ($nL + nH \times 256$) dot
Parameter range	$0 \leq nL \leq 255, 0 \leq nH \leq 255$
Default value	not have
Support mode	All models
Matters needing attention	This command is valid only at the start of a row. The following illustration:

	<p>If the setting is out of print range, use the maximum value of the printable unit.</p>
Use example	<pre>1b 40 1d 4c 08 00 30 31 32 0d 0a 30 31 32 0d 0a</pre>

Set horizontal and vertical movement units

Instruction name	Set horizontal and vertical movement units
Instruction code	ASCII : GS P x y Decimal system : 29 80 x y Hexadecimal: 1D 50 x y
Function description	<ul style="list-style-type: none"> The lateral movement units are set to 25.4/ x mm (1/ x inch) longitudinal moving units to be set to 25.4/ y mm (1/ y) When x and y are 0, X and y are set to default values.
Parameter range	$0 \leq x \leq 255, 0 \leq y \leq 255$
Default value	$x = 200, y = 380$, At this point a moving unit is a print point. The transverse distance is about 1/8mm, and the vertical distance is about 1/15mm.
Support mode	80XXX
Matters needing attention	<ul style="list-style-type: none"> Mobile unit standard mode can be set, page mode can not be set. Perpendicular to the feed direction transverse to longitudinal feed direction. In standard mode, the following commands are either X or Y, even if the character is rotated (inverted or rotated 90 degrees) <ul style="list-style-type: none"> ①Command with X: ESC SP, ESC \$, ESC \, FS S, GS L, GS W ②Command with Y: ESC 3, ESC J, GS V Under the age mode, use X or Y according to the regional direction and print start position. <ul style="list-style-type: none"> ①When the print start position is set to the upper left corner of the ESC T command (from the left to the right) or the lower right corner (from right to left): <ul style="list-style-type: none"> Command with X: ESC SP, ESC \$, ESC W, ESC \, FS S Command with Y: ESC 3, ESC J, ESC W, GS \$, GS \, GS V

	<p>②When the print start position is set up in the upper right corner of the ESC T command (from the top to bottom) or in the lower left corner (print direction from bottom to top):</p> <p>Command with X: ESC 3, ESC J, ESC W, GS \$, GS \</p> <p>Command with Y: ESC SP, ESC \$, ESC W, ESC \,FS S, GS V</p> <ul style="list-style-type: none"> • This command does not affect other settings that were previously set. • The smallest unit of movement is the result of the combined action of the command and other commands. • One inch equals 25.4mm.
Use example	<pre>1d 50 c8 c8 1B 4C 1B 57 30 00 00 00 78 00 30 00 1B 33 18 1B 57 30 31 32 30 31 32 30 31 32 30 31 32 30 31 32 30 31 32 30 31 32 30 31 32 30 31 32 30 31 32 30 31 32 30 31 32 30 31 32 30 31 32 0C</pre>

Select font

Instruction name	Select font												
Instruction code	ASCII : ESC M n Decimal system : 27 77 n Hexadecimal: 1b 4d n												
Function description	Select character font <table border="1" style="margin-left: 20px;"> <thead> <tr> <th>n</th> <th>Function</th> </tr> </thead> <tbody> <tr> <td>0, 48</td> <td>Select font A (12×24) .</td> </tr> <tr> <td>1, 49</td> <td>Select font B (9×24) .</td> </tr> <tr> <td>2, 50</td> <td>Select font C (9×17)</td> </tr> <tr> <td>3, 51</td> <td>Select font D (8×16)</td> </tr> <tr> <td>4, 52</td> <td>Select font E (16×18)</td> </tr> </tbody> </table>	n	Function	0, 48	Select font A (12×24) .	1, 49	Select font B (9×24) .	2, 50	Select font C (9×17)	3, 51	Select font D (8×16)	4, 52	Select font E (16×18)
n	Function												
0, 48	Select font A (12×24) .												
1, 49	Select font B (9×24) .												
2, 50	Select font C (9×17)												
3, 51	Select font D (8×16)												
4, 52	Select font E (16×18)												
Parameter range	n = 0, 1, 2, 3, 4, 48, 49, 50, 51, 52												
Default value	n = 0												
Support mode	Part model												
Matters needing attention	<ul style="list-style-type: none"> • ESC ! You can also select the font type, but the settings you have received from the last command are valid. 												
Use example	<pre>1b 40 1b 4d 00 30 31 32 0d 0a 1b 4d 01</pre>												

	30 31 32 0d 0a 1b 4d 02 30 31 32 0d 0a 1b 4d 03 30 31 32 0d 0a 1b 4d 04 30 31 32 0d 0a
--	--

Set character printing

Instruction name	Set character printing																														
Instruction code	ASCII : ESC ! n Decimal system : 27 33 n Hexadecimal : 1B 21 n																														
Function description	<p>Set character printing (Font、reverse type、invert、bold、double-height、double width、and underline）， Bit of parameter n</p> <p>Defined as follows:</p> <table> <thead> <tr> <th>Bit</th> <th>Function</th> <th>Val</th> </tr> </thead> <tbody> <tr> <td>0</td> <td>Word</td> <td>Model</td> </tr> <tr> <td>1</td> <td>Undefinition</td> <td>Normal Small character</td> </tr> <tr> <td>2</td> <td>Undefinition</td> <td></td> </tr> <tr> <td>3</td> <td>Wide</td> <td>Volume</td> </tr> <tr> <td>4</td> <td>Double</td> <td>Height</td> </tr> <tr> <td>5</td> <td>Double</td> <td>Wide</td> </tr> <tr> <td>6</td> <td>Undefinition</td> <td></td> </tr> <tr> <td>7</td> <td>Underline</td> <td></td> </tr> <tr> <td></td> <td></td> <td>Cancel Set</td> </tr> </tbody> </table>	Bit	Function	Val	0	Word	Model	1	Undefinition	Normal Small character	2	Undefinition		3	Wide	Volume	4	Double	Height	5	Double	Wide	6	Undefinition		7	Underline				Cancel Set

Matters needing attention	<p>This instruction is valid for both Chinese and foreign fonts</p> <p>When ESC @, printer reset, power down, this instruction is set to fail.</p>																														
Use example	1B 40 1B 21 01 30 31 32 0D 0A 1B 40 1B 21 02 30 31 32 0D 0A 1B 40 1B 21 04 30 31 32 0D 0A 1B 40 1B 21 08 30 31 32 0D 0A 1B 40 1B 21 10 30 31 32 0D 0A 1B 40 1B 21 20 30 31 32 0D 0A 1B 40 1B 21 40 30 31 32 0D 0A 1B 40 1B 21 80 30 31 32 0D 0A																														

Set character size

Instruction name	Set character size																											
Instruction code	ASCII : GS ! n Decimal system : 29 33 n Hexadecimal : 1d 21 n																											
	Set character size is 1-8 times wide, 1-8 times higher. Defined as follows: Set the character height 4 to 7 bits with a height of between 0 and 3 bits.																											
	Table 1 Character width setting																											
Function description	<table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th>Hexadeci-mal</th> <th>Decim-al system</th> <th>Width</th> </tr> </thead> <tbody> <tr><td>00</td><td>0</td><td>1 (Normal)</td></tr> <tr><td>10</td><td>16</td><td>2 (Double width)</td></tr> <tr><td>20</td><td>32</td><td>3</td></tr> <tr><td>30</td><td>48</td><td>4</td></tr> <tr><td>40</td><td>64</td><td>5</td></tr> <tr><td>50</td><td>80</td><td>6</td></tr> <tr><td>60</td><td>96</td><td>7</td></tr> <tr><td>70</td><td>112</td><td>8</td></tr> </tbody> </table>	Hexadeci-mal	Decim-al system	Width	00	0	1 (Normal)	10	16	2 (Double width)	20	32	3	30	48	4	40	64	5	50	80	6	60	96	7	70	112	8
Hexadeci-mal	Decim-al system	Width																										
00	0	1 (Normal)																										
10	16	2 (Double width)																										
20	32	3																										
30	48	4																										
40	64	5																										
50	80	6																										
60	96	7																										
70	112	8																										
Parameter range	not have																											
Default value	n = 0																											
Support mode	All models																											
Matters needing attention	This directive is valid for both Chinese and foreign fonts except HRI characters. When ESC @, printer reset, power down, this instruction is set to fail.																											
Use example	1b 40 1d 21 11 30 31 32 0d 0a																											

Table 2
Character height setting

Hexadeci-mal	Decimal system	Height
00	0	1 (Normal)
01	1	2 (Double height)
02	2	3
03	3	4
04	4	5
05	5	6
06	6	7
07	7	8

	30 31 32 0d 0a
--	----------------

Set, remove white print

Instruction name	Set, remove white print
Instruction code	ASCII : GS B n Decimal system : 29 66 n Hexadecimal : 1d 42 n
Function description	Set or release the white print mode. When the least significant bit N 0, inverse mode is closed. When the least significant bit n 1, open the inverse mode.
Parameter range	not have
Default value	n = 0
Support mode	All models
Matters needing attention	Only the lowest bit of n is valid This command is valid for both built-in and user-defined characters. When the inverse mode is open, it is blank on the ESC set SP is also effective. This command does not affect bitmap、user defined bitmap、bar code、HRI character、and the Space skipped by HT, ESC \$. This command does not affect line spacing. Inverse mode prior to underline mode. When setting the visual mode, even if the open mode is also prohibited the underscore (but not cancel). When ESC @, printer reset, power down, this instruction is set to fail.
Use example	1b 40 1d 42 01 30 31 32 0d 0a 30 31 32 0d 0a

Set, remove underline

Instruction name	Set, remove underline		
Instruction code	ASCII : ESC - n Decimal system : 27 45 n Hexadecimal: 1B 2D n		
Function description	Based on the following n values, set / remove the underline mode: <table border="1" style="margin-left: auto; margin-right: auto;"> <tr> <td style="padding: 2px;">n</td> <td style="padding: 2px;">Function</td> </tr> </table>	n	Function
n	Function		

	0, 48	Remove the underline mode	
	1, 49	Set the underline mode (1 Point rough)	
	2, 50	Set the underline mode(2 Point rough)	
Parameter range	$0 \leq n \leq 2, 48 \leq n \leq 50$		
Default value	n = 0		
Support mode	All models		
Matters needing attention	<p>The printer can underline all characters (including the right side of the character), except for the blank set by the HT.</p> <p>The printer can give clockwise 90 degrees of the characters and the reverse character print underlined.</p> <p>When the n value is set to 0 or 48, the underline mode is removed, the following data is not printed,</p> <p>And the roughness of the underline that is set before lifting the underline mode does not change.</p> <p>The default underline is 1.</p> <p>Changing the character size does not affect the coarseness of the current underline.</p> <p>Use ESC, you can also set or remove the underline mode, but note that the last command is valid.</p>		
Use example	1b 40 1b 2d 01 30 31 32 0d 0a 1b 40 1b 2d 02 30 31 32 0d 0a 1b 40 1b 2d 00 30 31 32 0d 0a		

Set, release 90 degree rotary printing

Instruction name	Set, release 90 degree rotary printing
Instruction code	ASCII : ESC V n Decimal system : 27 86 n Hexadecimal: 1B 56 n
Function description	Set, release 90 degree rotary printing. When n is equal to 0 or 48, lift the 90 degree rotary printing. When the n is equal to 1 or 49, set the 90 degree rotary printing.
Parameter range	$0 \leq n \leq 1, 48 \leq n \leq 49$
Default value	n = 0
Support mode	All models
Matters needing attention	<p>When the underline mode is set, the printer does not underline the character rotated 90 degrees clockwise</p> <p>In the clockwise 90 degree rotation mode, double height and width is commanded that the direction enlarged</p>

	character should be opposite to the command from the double height and width under the general mode. When ESC @, printer reset, power down, this instruction is set to fail.
Use example	1b 40 1b 56 01 30 31 32 0d 0a 30 31 32 0d 0a

Set print alignment mode

Instruction name	Set print alignment mode (Left, Center, Right)								
Instruction code	ASCII : ESC a n Decimal system : 27 97 n Hexadecimal: 1B 61 n								
Function description	Alignment of all data in a row, n value is as follows: <table><tr><td>n</td><td>model</td></tr><tr><td>0, 48</td><td>Left,</td></tr><tr><td>1, 49</td><td>Center</td></tr><tr><td>2, 50</td><td>Right</td></tr></table>	n	model	0, 48	Left,	1, 49	Center	2, 50	Right
n	model								
0, 48	Left,								
1, 49	Center								
2, 50	Right								
Parameter range	$0 \leq n \leq 2$ or $48 \leq n \leq 50$								
Default value	n = 0								
Support mode	All models								
Matters needing attention	When ESC @, printer reset, power down, this instruction is set to fail.								
Use example	1B 40 1B 61 02 30 31 32 0D 0A 1B 40 1B 61 01 30 31 32 0D 0A 1B 40 1B 61 00 30 31 32 0D 0A								

Set Chinese mode

Instruction name	Set Chinese mode
Instruction code	ASCII : FS & Decimal system : 28 38 Hexadecimal: 1C 26
Function description	Select Chinese mode
Parameter range	not have
Default value	not have

Support mode	All models
Matters needing attention	When selecting a Chinese character pattern, the printer processes all Chinese characters, two bytes at a time. In the order of the first byte and second byte handle the Chinese character code.
Use example	1b 40 1C 26 B0 AE C9 CF D7 D4 BC BA 0d 0a 1C 2E B0 AE C9 CF D7 D4 BC BA 0d 0a

Cancel Chinese mod

Instruction name	Cancel Chinese mode
Instruction code	ASCII : FS . Decimal system : 28 46 Hexadecimal : 1C 2E
Function description	Cancel Chinese mode
Parameter range	not have
Default value	not have
Support mode	All models
Matters needing attention	When you do not select the Chinese character pattern, all character code as a ASCII code, each character to deal with
Use example	not have

International character set

Instruction name	International character set																		
Instruction code	ASCII : ESC R n Decimal system : 27 82 n Hexadecimal : 1B 52 n

Define NV bitmap

Instruction name	Define NV bitmap
Instruction code	ASCII : FS q n [xL xH yL yH d1...dk]1...[xL xH yL yH d1...dk]n Decimal system : 28 113 n [xL xH yL yH d1...dk]1...[xL xH yL yH d1...dk]n Hexadecimal : 1C 71 n [xL xH yL yH d1...dk]1...[xL xH yL yH d1...dk]n
Function description	Defines a NV bitmap with a specific n value. N specifies the number of NV bitmaps defined XL, xH for the definition of the NV bitmap to specify the number of points in the horizontal direction (xL+xH*256) *8. YL, yH for the definition of the NV bitmap to specify the number of points in the vertical direction (yL+yH*256) *8.
Parameter range	1 ≤ n ≤ 255 0 ≤ xL ≤ 255 0 ≤ xH ≤ 3 (1 ≤ (xL+xH*256) ≤ 1023) 0 ≤ yL ≤ 255 0 ≤ yH ≤ 1 (1 ≤ (yL+yH*256) ≤ 288) 0 ≤ d ≤ 255 k = (xL+xH*256)*(yL+yH*256)*8 Total defined data area = 64K bytes
Default value	not have
Support mode	All models
Matters needing attention	Frequent execution of write commands maybe damage NV storage. Therefore, it is recommended that one day be performed on the NV storage for no more than 10 write operation.

After an image is placed in the NV storage, the printer performs a hardware reset operation.

Therefore, the user - defined character, the next - pass bitmap should be defined after completion of the command. Printer clear receive and print buffer, and reset to the effective mode when connect to the power supply.

(Hardware reset interface not supported)

This command cancels all NV bitmaps that have been defined with this command.

Mechanical operation cannot be performed during the processing of this command until the hardware reset is completed. (Including when the cover is open initialize the print head position paper feed button etc.)

During this command processing, the printer is busy and stops receiving data when writing data to the user's NV memory.

Therefore, it is forbidden to transfer data during execution of this command, including real-time commands.

A NV bitmap is a bitmap defined in a non-volatile memory.

Using FS Q definition FS P printing.

In standard mode, the command is valid only when a row is started.

The order of the 7 bytes of the <FS~yH> is normally processed after the command is valid.

When the amount of data exceeds the xL, x, yL, yH defined by the range of the left capacity, The printer will handle the range defined by xL, xH, yL, and yH beyond the defined scope.

In the first set of bitmaps, When xL, xH, yL, and yH are out of bounds for any parameter, the command is disabled.

In a group of bitmaps that are not the first group, When the printer encounters xL, xH, yL, yH beyond the defined range, The command is stopped and then start to write the NV image. Now, The NV bitmap that has not been defined is not available (undefined), But any previously defined NV bitmap is still valid.

D represents the definition of data, In data (d), a 1 bit specifies a point to be printed and a 0 bit specifies a point that is not printed.

This command defines n as the number of NV bitmaps. The number starts from the bitmap 01H order.

So the first data set [xL xH yL yH d1...dk] is the NV bitmap of 01H , the last data set [xL xH yL yH d1...dk] is the NV bitmap of n . The total number is consistent with the number of FS P commands set in the NV bitmap.

The definition of a NV bitmap data is composed of [xL xH yH D1...Dk] yL. So, when only one NV bitmap is n=1, the printer only processes the data set [xL xH yH D1 yL dk] at a time.

The printer uses NV memory ($[data: (xL+xH * 256) * (yL+yH*256) * *8] + [header:4]$) bytes.

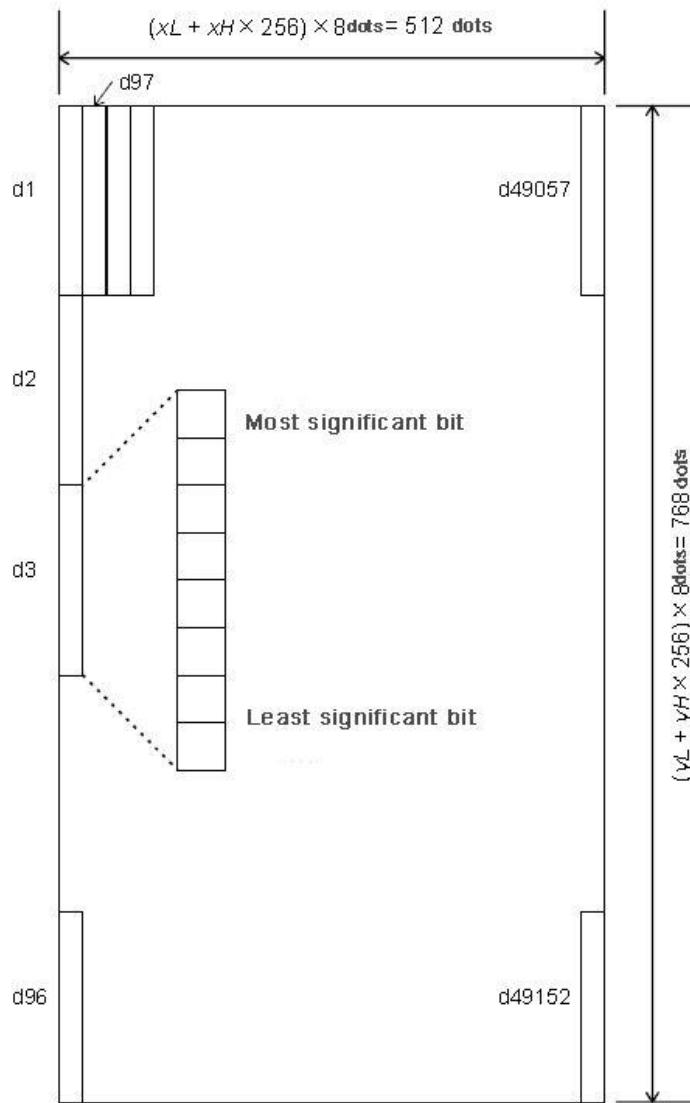

The definition of this printer is 192K bytes (max). The command can define several bitmaps, but can not define the total data capacity [bitmap data + head] more than 192K bytes of the bitmap.

Even if the ASB is set, the printer does not transmit the ASB state or the execution state detection during processing the command.

Once a NV bitmap is defined, it cannot be executed by the ESC @ command, reset, and power down.

This command executes only the definition of the NV bitmap, and the printing of the.NV bitmap that does not execute is performed by the FS P command.

Graphic: xL = 64, xH = 0, yL = 96, yH = 0

Use example	<pre> 1B 40 1C 71 01 03 00 03 00 FF </pre>
-------------	---

	FF FF FF FF FF 1C 70 01 00
--	---

Print NV bitmap

Instruction name	Print NV bitmap										
Instruction code	ASCII : FS p n m Decimal system : 28 112 n m Hexadecimal : 1C 70 n m										
Function description	<p>Print the NV bitmap n with the pattern specified by m.</p> <table border="1"> <tr> <td>m</td> <td>Model</td> </tr> <tr> <td>0, 48</td> <td>Normal</td> </tr> <tr> <td>1, 49</td> <td>Double width</td> </tr> <tr> <td>2, 50</td> <td>Double height</td> </tr> <tr> <td>3, 51</td> <td>Double width and height</td> </tr> </table>	m	Model	0, 48	Normal	1, 49	Double width	2, 50	Double height	3, 51	Double width and height
m	Model										
0, 48	Normal										
1, 49	Double width										
2, 50	Double height										
3, 51	Double width and height										
Parameter range	$0 \leq m \leq 3$ $48 \leq m \leq 51$ $1 \leq n \leq 255$										
Default value	not have										
Support mode	All models										
Matters needing attention	<p>n is the number of NV bitmaps (defined with the FS Q command) m specifies bitmap mode.</p> <p>A NV bitmap is a bitmap defined in a non-volatile storage. Using FS Q to define FS P printing.</p> <p>This command is invalid when the specified NV bitmap does not exist.</p> <p>In standard mode, the command is valid only if there is no data in the print buffer.</p> <p>This command is not affected by print mode (FontBold printing, overlapping、Underline、Character dimension、Inverse print or Character 90) , except rotation etc reversed print mode. If more than one line is printed, the data is not printed. At ordinary and double width mode, the command input n (n NV bitmap height),in double height and four times the size of mode (the command input 2n, N, ESC and NV bitmap height) 2 or ESC 3 set line spacing.</p> <p>After printing the bitmap, the command sets the print position at the beginning of a line, and the subsequent data is processed by ordinary data.</p>										
Use example											

④Tab command

Horizontal tabulation

Instruction name	Horizontal tabulation
Instruction code	ASCII : HT Decimal system : 9 Hexadecimal: 09
Function description	Move the printing position to the next tab position
Parameter range	not have
Default value	not have
Support mode	All models
Matters needing attention	Tab position set by ESC D This command will be treated as a LF instruction if the tab position is not set (the default level is not a tab stop) If the tab position exceeds the print area, the coordinates will be moved to the start of the next line newline)
Use example	Not have

Setting level tab position

Instruction name	Setting level tab position
	ASCII : ESC D [d]k NUL Decimal system : 27 68 [d]k 0 Hexadecimal : 1B 44 [d]k 00
Function description	Set the horizontal tab position, the parameters are as follows: d1 ... dk: Setting level tab position, Take 8 points for unit. NULL is the end symbol
Parameter range	XX58: $1 \leq d \leq 46$ ($d_1 < d_2 < \dots < d_k$, $1 \leq k \leq 16$) XX80: $1 \leq d \leq 70$ ($d_1 < d_2 < \dots < d_k$, $1 \leq k \leq 16$)
Default value	[d]k = 0 (Default no level tab position)
Support mode	All models
Matters needing attention	Tab position is as follows:

	<p>set tab positions D1 and D2</p>
Use example	not have

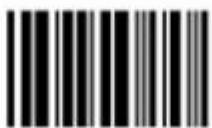

⑤Dimension bar code printing command

Select the print position HRI characters

Name	Select the print position HRI characters
Format	ASCII : GS H n Decimal code : 29 72 n Sixteen hexadecimal code : 1D 48 n
Description	Print bar code print position HRI characters n Select the print position as shown below: n print position 0, 48 not print 1, 49 in the bar code 2, 50 in the code below 3, 51 in the upper part and the lower part of the bar code
Range	$0 \leq n \leq 3$ or $48 \leq n \leq 51$
Default	n = 0
Model	ALL
Be careful	When ESC @, printer reset, power down, the set of the command is failure
Using sample	none
Instruction	Set barcode readable character (HRI) print position

name	
Instruction code	ASCII : GS H n Decimal system : 29 72 n Hexadecimal : 1D 48 n
Description	Print bar code print position HRI characters n Select the print position as shown below: n print position 0, 48 not print 1, 49 in the bar code 2, 50 in the code below 3, 51 in the upper part and the lower part of the bar code
Range	$0 \leq n \leq 3$ or $48 \leq n \leq 51$
Default	n = 0
Model	ALL
Be careful	When ESC @, printer reset, power down, the set of the command is failure
Using sample	none

Set the height of bar code

Name	Set the height of bar code
Format	ASCII : GS h n Decimal code : 29 104 n Sixteen hexadecimal code : 1D 68 n
Description	Set the height of bar code. n set the vertical point  Height 50  Height 100
Range	$1 \leq n \leq 255$
Default	n = 64
Model	ALL
Be careful	When ESC @, printer reset, power down, the set of the command is failure
Using sample	none

Set the bar width

Name	Set the bar width
Format	ASCII : GS w n Decimal code : 29 119 n Sixteen hexadecimal code : 1D 77 n
Description	Set the bar code level size. n set the bar width

		Width 3
		Width 4
Range	1 ≤ n ≤ 6	
Default	n = 2	
Model	ALL	
Be careful	When ESC @, printer reset, power down, the set of the command is failure	
Using sample	none	

Barcode printing

73	CODE128	changeable	$2 \leq n \leq 255$	00H~7FH	$0 \leq d \leq 127$
74	UCC/EA N128	changeable	$2 \leq n \leq 255$	00H~7FH C1H~C4H(FNC)	$0 \leq d \leq 127$ $d = 193, 194, 195, 196$
Range	(A) $0 \leq m \leq 6$ (B) $65 \leq m \leq 74$				
Default	none				
Model	ALL				
Be careful	<p>If bar code width exceeds the specified range, the printer can't execute bar code printing.</p> <p>The command to print bar code requirements for feed, regardless of ESC 2 or ESC 3 set line spacing.</p> <p>This command is not affected by ESC! Character style.</p> <p>Print bar codes, the command will print position is set at the start of a line.</p> <p>When $m:0-6(A) \& 65-71(B)$ choose the same bar code system, the printing effect is the same.</p> <p>$m=0-6(A)$, the code by the end of NULL code.</p> <p>$m=65-74(A)$, the code use n to express data length</p> <p>k Used for illustration, no transmission required</p> <p>k use to indicate not transmission</p> <p>When printing UPCA($m=0$ or 65), need noted:</p> <p>Regardless of the input data length is 11 or 12, check bit will automatically insert or error correction.</p> <p>The starting character, middle separator character, terminator inserted automatically.</p> <p>When printing UPCE($m=1$ or 66), need noted:</p> <p>When data length is 6, system character(NSC)0 insert automatically</p> <p>When data length is 7,8,11,12, the first system character (NSC)$d1$ must be 0</p> <p>Regardless of input data length is 6,7,8,11 or 12, check bit will insert or error correction automatically.</p> <p>Regardless of input data length is 6,7,8,11 or 12, barcode readable characters(HRI) only show 6 bits of data, not include system (NSC) and check code;</p> <p>The transformation relationship of transmission data and printing data is as follows:</p>				

The data transferred												The data printed					
d2	d3	d4	d5	d6	d7	d8	d9	d10	d11	d1	d2	d3	d4	d5	d6		
0~9	0~9	0	0	0	-	-	0~9	0~9	0~9	d2	d3	d9	d10	d11	0		
0~9	0~9	1	0	0	-	-	0~9	0~9	0~9	d2	d3	d9	d10	d11	1		
0~9	0~9	2	0	0	-	-	0~9	0~9	0~9	d2	d3	d9	d10	d11	2		
0~9	0~9	3~9	0	0	-	-	0~9	0~9	d2	d3	d4	d10	d11	3			
0~9	0~9	0~9	1~9	0	-	-	-	-	0~9	d2	d3	d4	d5	d11	4		
0~9	0~9	0~9	0~9	1~9	-	-	-	-	5~9	d2	d3	d4	d5	d6	d11		

When d6 is 1~9, it should ensure d7,d8,d9,d10 is 0, d11 is 5~9.

The Start character and terminator insert automatically.

When print EAN13 (m = 2 or 67) , need noted:

Regardless of input data length is 12 or 13, check bits insert or error correction automatically.

The starting character, middle separator character, terminator inserted automatically.

When print EAN8 (m = 3 or 68) , need noted:

Regardless of input data length is 7 or 8, check bits insert or error correction automatically.

The starting character, middle separator character, terminator inserted automatically.

When print CODE39 (m = 4 or 69) 时, need noted:

When d1 or dn is not starting character/ terminator “*”, coder insert “*” automatically.

When data meet “*”, coder see it as the terminator, the other data as a common data to process;

Check code do not calculate and add automatically

When print ITF25 (m = 5 or 70) , need noted:

The Start character and terminator insert automatically.

Check code do not calculate and add automatically.

When print CODABAR (NW-7) (m = 6 or 71) , need noted:

The Start character and terminator do not insert automatically, need user add manually, the range is “A” ~ “D” or “a” ~ “d”

Check code do not calculate and add automatically.

Print CODE93 (m = 72) , need noted:

The Start character and terminator insert automatically.

Two check code calculate and add automatically.

When setting code readable character (HRI) to print, not setting any HRI code to show begin/end.

When setting code readable character (HRI) to print,control code is replaced by space.

When using the CODE128 (M = 73):

On the CODE128 bar code and code table information, see Appendix D.

In the printer when you use CODE128, please consider the following factors on data transfer:

- ① The bar code data string head have to choose coded character set (CODE A, CODE B, or CODE C), is used to select the first use of the code set.
- ② The character "{" and a combination of characters to define the special characters. Through the continuous transmission of two "ASCII" {"definition of character".

ASCII code, Sixteen hexadecimal code, Decimal code

Special character s	Data transmission		
	ASCII code		ASCII code
SHIFT	{S	7B,53	123, 83
CODEA	{A	7B,41	123, 65
CODEB	{B	7B,42	123, 66
CODEC	{C	7B,43	123, 67
FNC1	{1	7B,31	123, 49
FNC2	{2	7B,32	123, 50
FNC3	{3	7B,33	123, 51
FNC4	{4	7B,34	123, 52
"{"	{{	7B,7B	123, 123

[Example] Print "instance data No. 123456."

In this case, the printer first by using the CODE B print "No.", and then use the CODE C to print the following numbers.

GS k 73 10 123 66 78 111 46 123 67 12 34 56

No.123456

CODE 128:

1b 40 1d 48 02 1d 68 64 1d 77 03
1d 6b 49 0A 7B 42 4E 6F 2E 7B 43 0C 22 38

- If the bar code data string head not code set select the character, the printer stop command processing, and the subsequent data processing as general data.
- If "{" and subsequent characters are not applicable to any special characters, the printer stop command processing, and the subsequent data processing as general data.
- If the printer received cannot be used for special code set of characters, the printer stop command processing, and the subsequent data processing as general data.
- Select the HRI character corresponding character printer does not print and shift character or code set.

	<ul style="list-style-type: none"> The functional character of the HRI character is blank. The control characters (<00>H? <1F>H and <7F>H) of the HRI character is blank. <p>< Other > To confirm the reservation about spacing in the bar code. (according to different spacing bar code types are also different.)</p>
Use example	<pre> 1b 40 1d 48 02 1d 68 64 1d 77 03 30 0D 0A 1d 6b 00 30 31 32 33 34 35 36 37 38 39 31 00 31 0D 0A 1d 6b 01 30 31 32 33 34 35 36 37 38 39 31 00 32 0D0A 1d 6b 02 30 31 32 33 34 35 36 37 38 39 31 32 00 33 0D 0A 1d 6b 03 30 31 32 33 34 35 36 37 00 34 0D 0A 1D 6B 04 30 31 32 41 42 20 24 25 2B 2D 2E 2F 00 35 0D 0A 1d 6b 05 30 31 32 33 34 35 36 37 38 39 31 32 00 36 0D 0A 1d 6b 06 2D 31 32 42 24 2B 2D 2E 00 1d 6b 06 43 31 32 33 34 35 36 34 38 39 00 36 35 0D 0A 1d 6b 41 0c 31 32 33 34 35 36 37 38 39 30 31 32 36 36 0D 0A 1d 6b 42 0c 30 32 33 34 35 36 30 30 30 30 38 39 36 37 0D 0A 1d 6b 43 0c 30 32 33 34 35 36 30 30 30 30 38 39 36 38 0D 0A 1d 6b 44 08 30 32 33 34 35 36 30 30 36 39 20 20 4e 4f 20 24 25 2b 2d 2e 2f 31 32 33 34 35 36 30 30 0D 0A 1d 6b 45 11 4e 4f 20 24 25 2b 2d 2e 2f 31 32 33 34 35 36 30 30 37 30 20 20 20 30 32 33 34 35 36 30 30 C5 BC CA FD 0D 0A 1d 6b 46 09 30 31 32 33 34 35 36 30 30 37 31 0d 0a 1d 6b 47 05 32 33 34 35 36 37 32 0d 0a 1d 6b 48 0b 32 33 34 35 36 41 42 2e 2f 2b 2c 37 33 0d0a 1d 6b 49 0A 7B 42 4E 6F 2E 7B 43 0C 22 38 </pre> <p>Code 128 :</p> <pre>1b 40 1d 48 02 1d 68 64 1d 77 03</pre>

⑥State command

Real-time transmission condition

Name	Real-time transmission condition
Format	ASCII : DLE EOT n Decimal code : 16 4 n Sixteen hexadecimal code : 10 04 n
Description	According to following parameters, real-time to transmit printer condition, parameters n is used to assign printer condition need transmit.: n = 1: transmit printer condition n = 2: transmit off-line condition n = 3: transmit error condition n = 4: transmit paper sensor condition
Range	1 ≤ n ≤ 4
Default	none
Model	ALL

Be careful	<ul style="list-style-type: none"> when printer receive this command return to relative condition immediately this command do not insert to command sequence with two or more bytes as far as possible. Even if printer is set to ban by ESC=(select peripherals),this command is still valid. printer transmit advanced condition, each condition use 1 bytes data to express. printer transmission status is not confirmed whether the host receive. printer should execute immediately receiving this command. This command only effect for serials printer. Printer should execute immediately receiving this command at any condition. <p>n=1: printer condition</p>

Real-time printer command

Name	Real-time printer command
Format	ASCII : DLE ENQ n Decimal code : 16 5 n

	Sixteen hexadecimal code : 10 05 n								
Description	<p>The printer response to the host request. Assign n as following request:</p> <table border="1"> <tr> <td>n</td> <td>request</td> </tr> <tr> <td>1</td> <td>Recover from error and start printing from error line</td> </tr> <tr> <td>2</td> <td>Recover from error after clean receiving and printing buffer.</td> </tr> <tr> <td></td> <td></td> </tr> </table>	n	request	1	Recover from error and start printing from error line	2	Recover from error after clean receiving and printing buffer.		
n	request								
1	Recover from error and start printing from error line								
2	Recover from error after clean receiving and printing buffer.								
Range	n = 1, 2								
Default	none								
Model	ALL								
Be careful	<p>Only when auto-cutter and opening housing have error, this command is valid.</p> <p>The printer will handle data when receiving this command.</p> <p>Even if printer at out-line, printing buffer is full or serial interface mode have error, this command also execute.</p> <p>Under parallel interface mode, this command will not execute.</p> <p>whenever you receive <10>H<05>H<n> (1≤n≤2) data sequence, will be sent condition.</p> <p>For example:</p> <p style="padding-left: 40px;">ESC * m nL nH dk , d1 = <10>H, d2 = <05>H, d3 = <01>H</p> <p>In a command data with two or more bytes, this command is not used.</p> <p>For example:</p> <p>If want to send ESC 3n to printer, but before n send, DTR(response to host is DSR) will become MARK. Before n send, take place FLE ENQ 2 interrupt. DLE ENQ 2 code <10>H will be as ESC3 code <10>H to execute.</p> <p>DLE ENQ 2 allow printer recover from error condition after clean receiving buffer and printing buffer data. The printer store valid state setting when error occur.(like ESC !, ESC3, etc) can use this command and ESC@ initialize printer fully. In addition, this command only valid for recoverable error except printer head temp error.</p>

⑦Other command

Initialize printer

Name	Initialize printer
Format	<p>ASCII : ESC @</p> <p>Decimal code : 27 64</p> <p>Sixteen hexadecimal code : 1B 40</p>
Description	<p>The content of initialize printer:</p> <p>Remove the print data in the buffer, the effective mode reset the printer model to open the printer power supply.</p>
Range	none
Default	none
Model	ALL

Be careful	none
Using sample	none

Self testing page print

Name	Self testing page print
Format	ASCII : DC2 T Decimal code : 18 94 Sixteen hexadecimal code : 12 54
Description	Self testing page print
Range	none
Default	none
Model	ALL
Be careful	none
Using sample	1B 40 12 54
