Color filter

The luminous color of the lamp can be adjusted according to your needs.

ND filter

With electronic dimming, the small-angle illumination can be reduced to less than 75LUX, which is generally used for authentic lighting.

UV filter

It can effectively filter UV rays in LED lamps and lanterns, thus protecting the illuminated object. It delivers superior performance in silk products lighting and cultural relics lighting.

CPL filter

It can eliminate the reflection of the object's surface so that the object in a high luminosity environment can also display its original appearance.

GND filter

GND filter are used to alter the light ratio into the lens. For example, in illuminating the oblique side of the square position of the object, the use of gradient filters allows the even and constant illumination of the object.

Other filter

Various filters in special bands can be customized according to your actual needs. They can be used in various unique places, such as wafer cutting, high-precision circuit board printing, and drug sorting.

DQ series framing optic lens is a multifunctional optical lens which integrates spot shaping, zooming, and projection. It is a product with complete independent intellectual property rights and global patents. It can adjust the shape, size and sharpness of the spot; through the insertion of light blocking imaging, you can arbitrarily adjust the shape of the spot.

DQ series of framing optic lens belongs to the 1.5 generation of optical products, compared with the first generation has the following characteristics.

1. Zoom and fixed-focus lens can be arbitrarily switched (the same specifications under the DQ zoom lens and XQ fixed-focus lens can be directly replaced).
2. High light efficiency (compared to the first generation of products, the light efficiency increased by 35%).
3. Delicate rotation feel (linear zoom, delicate feel).
4. Full series supports zhaga protocol installation.

Industrial Grade Optical Filters

It can match a variety of industrial-grade optical filters and support the customization of special narrowband and ultra narrowband optical filters. Some filter functions can be superimposed, such as HD UV+color filter, HD UV+soft filter, amongst others.

工业级光学滤镜

可匹配各种工业级光学滤镜,可定做特殊窄带、极窄带光学滤镜,部分滤镜功能可叠加,例如:HD UV+颜色片滤镜,HD UV+柔光滤镜等等。

UV filter

It can effectively filter UV rays in LED lamps and lanterns, thus protecting the illuminated object. It delivers superior performance in silk products lighting and cultural relics lighting.

CPL filter

It can eliminate the reflection of the CPL filter so that the object in a high luminosity environment can also display its original appearance.

ND filter

With electronic dimming, the small-angle illumination can be reduced to less than 75LUX, which is generally used for authentic lighting.

GND filter

GND filter are used to alter the light ratio into the lens. For example, in illuminating the oblique side of the square position of the object, the use of gradient filters allows the even and constant illumination of the object.

Color filter

The luminous color of the lamp can be adjusted according to your needs.

Other filter

Various filters in special bands can be customized according to your actual needs. They can be used in various unique places, such as wafer cutting, high-precision circuit board printing, and drug sorting.
