TJ 2231 Universal Hot Mounting Materials

Introduction

The series of acrylic resin hot mounting materials produced by our company are suitable for mounting machines of various models and specifications at home and abroad. Using edge-preserving heat-mounting material, can protect the edge of the sample.

All metallographic mounting series products are made of special materials and special additives according to the characteristics of metallographic samples. After mounting, it is firmly and tightly combined with the sample, and it is not easy to create a gap with the edge of the sample, so as to avoid various external interferences.

Technical specifications

Product	TJ-2231
Description	Phenoloc Resin
Components	Black,Green,Red color, Grit with powder.
Features	Low price, black,green and red phenolic grit.
Application	For routine applications suit for most products.
Heat time	4-6min
Cooling time	2-3min
Cooling speed	High/Medium
Pressure	100-300bar
Heating temperature	150-180℃
Hardness	85-90Shore D

*The above parameters is base on Φ30mm mold.
