

Introduction of License Plate Recognition Camera (Four-line Screen)

Model: RPL-XY8

This product is a mature and stable license plate recognition all-in-one machine after years of upgrading and improvement. This machine is easy to install, cost-effective and widely accepted by the market.

The equipment is widely used in: government agencies, intelligent buildings, office buildings, high-end property communities, colleges and universities, enterprises and institutions, industrial and mining enterprises and other places.

Features:

1. The strong support of the cloud-parking interconnection platform: the perfect combination of high-definition license plate recognition + cloud-parking interconnection platform, plus the functions and features of the cloud platform such as payment and management, fully showing the value advantage of the unattended parking system
2. Humanized appearance design: the camera is tilted down: avoid light and rain, and view the license plate directly; the recognition range is wider.
3. Personalized creation: real materials, exquisite workmanship and originality;full, delicate, atmospheric, and good color sense; meet the needs of customers who advocate practicality and beauty!
4. Diversified scene applications: adapt to the needs of different scene angles: the camera recognition angle can be fine-tuned up, down, left and right to achieve the best recognition angle, with a recognition rate of over 99%.
