## WHAT IS RET-FACE ?

RET-Face is a revolution in the field of facial anti-aging.

The goal of magnetoelectric stimulation is to depolarize motor nerves, synchronize thermal energy output and pulse magnetic technology to stimulate facial muscles, produce muscle contraction, reduce facial wrinkles, and non-invasive natural lift and tighten the face.

## THREE CORE TECHNOLOGIES OF RET-FACE

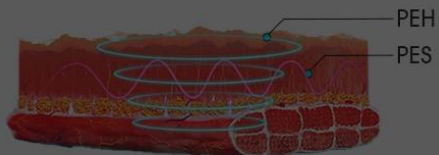

Using a combination of three core technologies: PET+PEH+PES . synchronous thermal energy reshapes and smooths the skin by heating the dermis and increasing levels of collagen and elastin fibers. The intense pulse magnetic technique restores and lifts facial tissue by selectively contracting muscles and increasing the density and mass of muscle structures.
