## WORKING PRINCIPLE »

DL-808S diode laser hair removal comes with 755NM+808NM+1064NM wave laser stack with semiconductors technology.

- ① Applicator will emit a laser beam
- ② The laser beam is absorbed by hair follicle melanin.
- ③ After absorption, the laser energy will be converted into heat energy.
- ④ Hair follicles and surrounding stem cells lose their activity and fall off . So the hair removal effect can be reached.
