

HVAC Drain Complete Protection Kit

Float Switch + U-Trap + AC Drain Line Cleaner

One Installation. Ongoing Maintenance. Total Protection.

Why You Need a Complete Condensate Drain Solution

Over 90% of HVAC water damage incidents are caused by condensate drain issues, not equipment failure. Clogged drain lines, improper traps, and lack of overflow protection can lead to costly repairs. This kit addresses prevention, maintenance, and protection in one complete system.

What's Included in the Kit

1. Float Switch – The Last Line of Defense

Automatically shuts down the HVAC system when abnormal water levels are detected, preventing overflow before damage occurs. Ideal for attic and ceiling-mounted air handlers.

2. U-Trap – Proper Drainage & Air Seal

Creates a reliable water seal to prevent air backflow and negative pressure issues. Ensures smooth and stable condensate drainage with long-term reliability.

3. AC Drain Line Cleaner – Prevent Clogs Before They Start

Designed for routine maintenance to reduce algae, biofilm, and debris buildup. Safe for PVC drain lines and helps convert emergency repairs into scheduled maintenance.

How the System Works Together

Drain Line Cleaner prevents buildup, the U-Trap ensures proper drainage, and the Float Switch provides automatic protection when abnormal conditions occur. Together, they form a closed-loop condensate risk management system.

Ideal Applications

Residential HVAC systems, attic installations, closet air handlers, central air conditioners, and heat pump systems. Especially suitable for hot and humid climates.

Why This Kit Sells Better on Amazon

Higher conversion rates than single components, reduced return rates, and recurring sales opportunities through drain line cleaner reorders. This kit sells a solution, not just parts.

Install once, maintain easily, and protect your property from costly HVAC water damage.
