

4.ASSEMBLY AND SET UP

1. Assembly

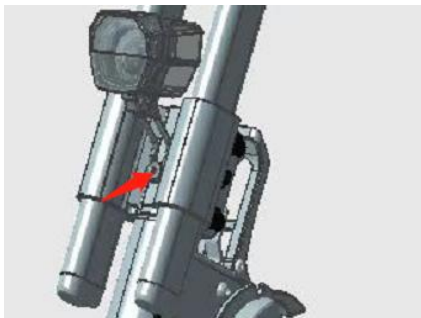

1.Put down the scooter and make the scooter stable

2.Loosen the 4 screws on the handlebar steering valve. Put the handlebar on the steering stem, pay attention to the correct position, and tighten the screw with the tool

3.Install the headlight, align the screw position of the seat fixing piece and lock the screw

4.To assemble the rear fender, install the rear fork and the fixing holes on both sides and tighten the screws

5.After assembly, turn on the battery switch and power button below dashboard to check if it's working properly
