MATTRESS

Better Mattress, Better Life

Rayson Global Co., Ltd is a Sino-US joint venture, established in 2007 which is located in Shishan Town, Foshan High-Tech Zone, and it's sited near the famous enterprises like Volkswagen, Honda Auto and Chimei Innolux, about 30 minutes by car from Guangzhou Baiyun International Airport and Canton Fair Exhibition Hall. Our head office "JINGXIN" began to make the spring wire for mattress innerspring production in 1989, Up to now, Rayson is not only the mattress factory (25000pcs/month), but also is the biggest mattress innersprings (150000pcs/month) and leading PP non woven fabric(1500tons/month) manufacturer in China with more than 600 employees. Over 90% of products are exported to Europe, the Americas, Australia and other parts of the world. We supply mattress components to Serta, Sealy, Kingkoil, slumberland and other famous international mattress brands. Rayson can produce pocket spring mattress, bonnell spring mattress, continuous spring mattress, memory foam mattress, foam mattress and latex mattress etc. All of our mattress series can pass USA CFR1633 & CFR1632, BS7177 & BS 5852, with high quality product and strictly implementing ISO9001:2000 international quality standard, we become a VIP member of USA ISPA.

.After years of development, we have fostered a mature mattress group of professional technicians and well trained marketing experts. With top quality, competitive prices, punctual shipment and good services, Rayson mattress keep moving forward in the competitive market. We can offer OEM/ODM service for our clients, all our mattresses spring can last for 10 years and not go down.

Pocket Spring Unit

pocket spring production

The pocket spring mattress comprises individual springs that feature an improved level of contouring to the irregular shape of the human body resulting in decreased peak pressure on hips and shoulders.

By comparison to "linked coil springs" the independent pocket springs significantly reduce partner disturbance.

Manufactured and developed in China, the Rayson pocket spring is one of the most highly sophisticated sleep technologies available in the world market.

Unlike conventional spring systems, where springs are connected to each other by wire, Rayson pocket springs have complete independence from one another, giving more freedom, less roll-together and minimising partner disturbance. Wrapped in a soft yet strong fabric, the springs work independently of one another, conforming to the exact unique shape of your body. Every time you move, the pocket springs instantly respond and move with you. Each spring is free to respond to individual pressure in relation to the weight placed upon it, leading support in contouring the body shape.

Independent tests show that a Rayson pocket spring mattress creates less pressure on the body than a conventional inner-spring mattress. Pressure points inhibit blood circulation which can cause tossing and turning. Pocket springs conform to the body's shape helping to maintain natural spinal alignment and distribute body pressure. This results in a more comfortable sleep with less disturbance.

Bonnell Spring Unit

The bonnell spring is the classic spring unit, and has, through the years, proven its worth. It is made from around hourglass shaped springs which are tied together to form a mat. A round helical crosswise connects each single spring to a spring unit.

Different thickness (gauge) of wire in the springs makes a harder or softer mattress. The higher the gauge, the firmer the mattress. The number of springs per mattress type is one of the key quality characteristics of a bonnell spring mattress.

Bonnell Spring System - the bonnell spring was Chinese first inner-spring unit. Especially developed electronic heat tempering makes the bonnell spring system virtually indestructible, while providing you with the support you need. All of Rayson's bonnell high tensile steel coil springs pass twice through a constant temperature, electronically controlled heat tempering process, ensuring there is no break-up under pressure. Not too firm, not too soft - the bonnell unit was developed as a result of scientific research to see that the correct amount of support goes to every part of the body. The steel side supports of the bonnell unit provide added stability to the very edge of the mattress, increasing the overall sleeping surface.

Rayson memory foam mattresses are made with high quality visco elastic memory foam with density rating not less than 50kg and not more than 80kg. Our memory foam mattresses are constructed with open cell structure thus helping the memory foam to breathe. Rayson memory foam mattresses don't feel hot as we use knitted covers. Our memory foam mattresses are made in China and meet the relevant fire safety regulations.

The visco-elastic foam gently moulds to your body's own individual shape, weight, and temperatures so you get weightless, pressure-free comfort. It gently supports every inch of your body, relieving the pressure that can hamper circulation. The result is less tossing and turning, and more restful sleep. You'll love the way the foam slowly reacts as you lie down.

Rayson memory foam mattress is hypo allergenic, antibacterial, prevents allergies and dust mites. Widely sold all over the world. Memory foam is the perfect remedy for back pain.

Natural latex has high resilience and strong elongation properties which help to enhance the performance over a long period of time. Foams made from synthetic latex do not have these properties to the same degree.

Healthier sleep

As well as its hygienic properties, latex is denser than synthetic rubber and it retains its shape and cushioning properties. The consistent resilience uniformly supports the sleeper while the softness provides overall comfort. Latex is quick to recover to its original shape and any motion disturbance caused by tossing and turning is absorbed rather than being transferred from one sleeping partner to another.

Latex healthier

Specially moulded to breathe more freely and mould to your body shape, latex supports your body uniformly, yet yields to the extra pressure and shape of your hips and shoulders, providing correct "spine in line" support. Natural latex has the highest natural bacteriostatic and antibacterial properties, unmatched by any other polyurethane or synthetic foam.

7 Zoned Latex -Looking after your entire body

Rayson's custom designed 7 zoned natural latex core provides the correct level of support for your natural body curves, offering exceptional orthopaedic support and uncompromising comfort.

Featuring 7 distinct zones anatomically designed for correct sleeping posture, each zone receives the proper, supple support that contributes to an overall better sleep. The softer upper back and pelvic regions offer pressure point reduction and correct spinal alignment. A firmer lumbar area supports the spine to relieve tension and lower back pain.

The natural latex core is made up of a unique pin core construction, which enables ventilation of body heat, better air circulation and moisture control.

Rayson

From the global select material, for deep sleep

Deep sleep can significantly enhance the body's immune ability, the existing experimental proof in deep sleep phases can generate many antibodies, enhance the ability of resistance, and it also can promote the body's tissues and organs of self healing ability.
